KNOWLEDGE DROPS

The Real Investing Course,

Investor Psychology

Investor Psychology

We hope you enjoyed the Investor Psychology tutorial, part 1, part 2, and part 3. As you move through your financial learning journey in the Crypto Academy, think of these reports and all the other Academy extras as Cliff's Notes. These reports are not meant to replace any of the episodes — they're here to help make things easier.

These reports were populated by the AI-powered RV bot on the new Real Vision platform.

Enjoy.

In this crossover highlight from the Real Investing Course, trading legends like Mike Green, Brent Johnson, Peter Brandt, and Pierre Andurand discuss the core principles and frameworks of investing so that you can apply them to your specific circumstance.

Whether in crypto or macro markets, investing is never straightforward. Growth as an investor requires constant educational upgrades and a deep understanding of your own personal goals, time horizons, and risk preferences. Adding that to your repertoire will help make you a more seasoned, confident investor. Which is what this 3-part module— The Game, Your Game, and Sources of Information — was all about. Here are the knowledge drops:

1. **In the digital age, filtering relevant information from the noise is a key skill for investors.** This requires diligence and close attention to where we source our data and information. Every day brings along another market-moving data release, so focusing on meaningful data is essential. And once you've sourced good information, taking ownership of your own trade ideas is key to growing as an investor. Context is key, and just because someone smart or wealthy has an idea, doesn't make it the right trade for you.

2. **Every investor is unique, with different goals, risk tolerances, and circumstances that only you or your investment advisor truly understand.** It's crucial to develop a personalized approach to investing and, once you find a strategy that works for you, build off that. This will help you consciously develop an investing framework tailored to your own specific circumstances.

3. **Investing requires constant judgment and adaptability.** It is not a one-size-fits-all endeavor. The answer to many questions about markets is often, "It depends." Markets are complex, ever-changing, and driven by the emotions of millions of investors. That means there is no sure formula to solve them, so, learning how to think and apply context and judgment is far more important than any single trade idea.

4. **A successful investing process involves various components that are all crucial to achieving positive returns.** From your investment thesis, time horizon, security selection, risk management, and more, the process requires constant review of the many steps that can make or break your trade.

5. **Most investors would benefit from taking a holistic approach to markets.** Investing requires a strong foundation of knowledge and understanding, so it's important to make sure that your body and mind are healthy and operating in concert together. Building a portfolio is part science and part art, so overall health and wellness should not be ignored.
