

## Real Vision Partners with Sui to Unlock Crypto Rewards and Shape the Future of Onchain Participation

**Real Vision is harnessing Sui's high-speed blockchain infrastructure to evolve its membership experience, and reimagine how financial communities connect, contribute, and get rewarded.**

[Real Vision](#), the financial media and membership platform renowned for its deep-dive analysis and expert-led insights, today announced a strategic partnership with **Sui**, the only blockchain built for mass adoption, to begin integrating blockchain functionality into its platform. Built as a high-performance Layer 1 network, Sui enables secure attribution of member contributions and lays the foundation for blockchain-powered loyalty and rewards in the future. By leveraging Sui's unique capabilities, Real Vision aims to enhance transparency, foster participation, and prepare for a more scalable, onchain-enabled member experience over time.

This initiative does not include a launch of a token. Instead, Real Vision will utilize Sui's infrastructure to support features like digital identity, proof of human, immutable trade idea attribution, and track record validation — building a trusted reputation layer for members. The integration is designed to be seamless — largely invisible to the user — but transformative in what it unlocks. Members will still access Real Vision content as they always have, but soon they'll be able to do more, earn more, and own more of the experience they help shape.

Together, Real Vision and Sui are laying the groundwork for a future where Real Vision members don't just consume content — they help shape the platform and share in the value they create. The transformation will happen largely behind the scenes — but will quietly unlock new ways to engage, earn, and participate in the experience.

## Why Sui? Why now?

Real Vision has selected the Sui blockchain as the foundation for its next-generation platform because of its unmatched combination of speed, scalability, and user-first design. Sui's high-performance architecture enables fast, secure, and scalable interactions — making it transparently track participation, verify contributions, and reward member value creation. This offers a behind-the-scenes coordination layer that supports large-scale community engagement without friction or complexity.

“We’re building a platform where the community’s collective intelligence isn’t just heard — *it’s rewarded*,” said Raoul Pal, co-founder and CEO of Real Vision. “By integrating Sui’s Web3 infrastructure, we’re enabling our members to contribute, coordinate, and benefit in ways that traditional systems simply can’t support.”

Real Vision continues to embrace a multi-chain approach, alongside this integration with Sui, and remains committed to its existing community initiatives.

The integration between the preeminent community finance platform and crypto’s performant blockchain, Sui, sets the stage for a more interactive and rewarding member experience — where participation drives value, and community plays a central role in shaping what’s next.

## What it means for Real Vision members

While some features will begin rolling out as early as this summer, this marks the beginning of a longer-term evolution of the Real Vision platform that will continue to expand over time. The new platform will ultimately enable:

- **Recognition of contribution** — from surfacing trade ideas to sharing market insight.
- **Reward structures** that reflect real participation, not just content consumption.
- **Trust-based coordination** through transparent tracking and validation.
- **New ways for members to help shape the platform** through structured input and contribution recognition.

“We see Real Vision as building the next generation of the internet for financial intelligence,” said Christian Thompson, Managing Director of the Sui Foundation. “We’re in the early stages of crypto being adopted in ways that are truly useful to users. Real Vision is helping create that bridge — bringing a community of people into a world where their contributions can be valued, tracked, and rewarded, and Sui has the speed and scale to support their bold ambitions.”

The news coincides with the release of [Episode One](#) of Real Vision’s new video series on crypto and Web3, which features Sui Foundation Managing Director Christian Thompson next to Real Vision Co-Founder and CEO Raoul Pal. The inaugural episode frames the philosophical and technological backdrop for this shift and introduces the possibilities ahead.

[Episode One](#) of the new Web3 video series is available now on [RealVision.com](#).

## **About Real Vision**

[Real Vision](#) is a platform for people who want to take control of their financial future. Through in-depth interviews, research, and a highly engaged membership community, Real Vision provides the knowledge, the tools, and the network investors need to navigate complex markets and uncover actionable ideas.

## **About Sui**

Sui is a first-of-its-kind Layer 1 blockchain and smart contract platform designed from the ground up to make digital asset ownership fast, private, secure, and accessible to everyone. Its object-centric model, based on the Move programming language, enables parallel execution, sub-second finality, and rich on-chain assets. With horizontally scalable processing and storage, Sui supports a wide range of applications with unrivaled speed at low cost. Sui is a step-function advancement in blockchain and a platform on which creators and developers can build amazing user-friendly experiences.
